

Account Takeover Warning Signs, One Page

A free Lumaset Foundation cheat sheet – keep this by your computer

What to Remember

- Use a different strong password for every important account.
- Password managers help make that realistic.
- Never share a verification code.
- Unrequested reset emails or 2FA codes are warning signs.
- Use the official app or typed web address, not the link in the message.
- Secure email first if anything looks wrong.
- Check recovery settings and recent activity.
